Abstract of JP2000143538

PROBLEM TO BE SOLVED: To provide an administration style of an immunomodulating agent effectively developing the drug action while suppressing the systemic absorption of the drug to avoid the side action even in a case of the presence of the seat of an immune disease on a part other than the mucosa and body surface where the direct application of drug is possible and enabling easy oral or parenteral administration by the patient himself. **SOLUTION:** This pharmaceutical composition contains an immunomodulating agent as an active component and is effective for the therapeutic treatment, relapse suppression and prevention of immune diseases by oral or parenteral administration. The immunomodulating agent is selectively taken in the digestive tract immune tissue or a macrophage existing in the tissue.
